

# SUPERHERO SCIENCE

## Project Overview

You will be creating your own superhero around a scientific concept. You will have to conduct a series of science experiments in order to investigate your concept and you will be expected to write this up in an accurate way. Your science investigations will then help you design your own superhero and create an origin story for your superhero. You will produce the front cover of a new comic book and you will also write a blurb to accompany your cover.

**Teachers:** SK, KA, CT  
**Year group:** 7  
**Subject:** Science and Art

## Essential content:

- To understand the key conventions of graphic novel cover art
- To develop skill in sketching in the style of graphic novels
- To build scientific knowledge
- To know how to conduct a fair experiment
- To be able to write up an experiment in an accurate way.

## Driving Questions

- Where does the 'super' in superhero come from?
- How can I accurately investigate a scientific concept?
- How do I draw like a graphic novel illustrator?

## What will I produce?

- A full colour graphic novel front cover illustrating the key elements of your superhero origin story
- A blurb explaining your story. This needs to demonstrate an understanding of the scientific concept you have chosen.
- An accurate scientific write up of an experiment.
